

NERO IWLCR 53 In-Wall Speaker

The Nero IW LCR53 in-wall LCR (left, right, center) trimless speaker is an elegant and discreet option for adding left, center, and right speaker channels to any type of sound system. The dual graphite-cone woofers produce clear, full bass tones with smooth mid-frequency roll-off, while the 1" silk dome dome tweeter gives you smooth distortion-free sound at the high end. The IW LCR53 is capable of handling up to 150 watts so it can be paired with all AVR's. The two-part mounting system allows you to install the mounting frame and grill before adding the speaker. This keeps the speakers clean during the installation process, and makes custom painting the grills much easier.
