

SPHERE6 Pendant Speaker

Great for hanging applications, OSD Audio's series of pendant speakers are as unique in style as they are in function. Available in black or white, the Shere6 pendant speaker includes a 6.5 woofer, 1-inch tweeter and high-power-handling capability for audiophile sound quality, making this speaker ideally suitable for open space environments such as malls, airports, or any indoor space with high vaulted ceilings. Fashioned after modern lighting fixtures, the Sphere6 pendant includes a 140-degree wide-dispersion coaxial driver for even coverage as well as a low-resonance cabinet structure.

Using hanging pendant speakers allows you to position the speakers much closer to the listener and consequently they can be played at much lower levels, creating, as it were, a dome of localized sound. This can be particularly useful in bars and restaurants where communication with the staff is critical, and at home where an intimate environment is desired.
